— ROOTED CUTTINGS —

Rooted cuttings are on economical and quite satisfactory way of building up your stock. First your initial cost is low and if ordinary good nursery practices are followed a satisfactory crop will result. For best results we urge they be planted where water is readily available and under some kind of partial shade for the first year. We usually ship during May but if an item or items are not quite ready for successful transplanting they will not be shipped until well rooted regardless of season. Some cuttings listed below may be shipped at once as they were rooted last winter and heeled-in outside for a year. (★)
